***Serving Your
IV Therapy Needs!***

IVNC Specializes In:

Our Team is Highly Proficient in the Latest Innovations!

IV Courses Offered:

Peripheral IV Starts

Instead of sending your patients out for IV access, call us to place those difficult lines.

Lab Draws

If you are having difficulty getting your blood work drawn, contact us for an IV nurse to come to your facility for a lab draw.

Midline & PICC Placements

If access is needed for one week, eight weeks, or longer, call us to place a longer term line. If you have found your patient's catheter has broken at the hub, we can usually repair it, or do an exchange over guide wire using the Modified Seldinger Technique.

Port-a-Cath Access Central Line Care & Maintenance

The crucial elements in IV therapy are education, training, responsibility, and accountability. Call us and we'll provide our highly trained specialized nurse experts to enhance your skilled nursing facility.

Specialty Services

- ◆ IV Infusion Services
- ◆ Vascular Access Nurse Specialist Available 24/7
- ◆ 24 Hour Phone Consultation

Portable Ultrasound

Portable ultrasound equipment is of *great* benefit to our clients by further reducing the need for costly and inconvenient trips to a hospital for interventional placement of PICC or Midlines. By using this technology, our team can consistently decrease IV complications and avoid many such results as local phlebitis which can result in the line being removed and restarted elsewhere. When the Midline or PICC is placed a few inches above the antecubital fossa, it is not subjected to the stress and irritation of the arm being bent at the elbow during normal daily activities. Patients can now be accessed through ultrasound technology, conveniently performed at their bedside by our registered IV Nurse Consultants.

Navigator

This truly is a great technological aid for accurately placing PICC lines. The Navigator System, made by Viasys Healthcare Medsystems, is designed to aid in the placement of central venous catheters (CVCs). By using this tool, we can determine the approximate tip location of a PICC line.

IV In-Services Offered:

- TPN
- IV Pump
- Port Access
- Midline/PICC Maintenance Review
- Basic IV Start Review
- Dressing Changes
- Site Selection
- Central Line
